

Business Requirement Document (BRD)

1. Project Overview

The Employee Leave Management System (ELMS) is a web-based application developed to automate the leave request and approval process within an organization. The system allows employees to apply for leave online, managers to approve or reject requests, and HR to maintain leave records efficiently. The application replaces the existing manual email and Excel-based process with a centralized digital solution.

2. Problem Statement

The current leave management process is manual. Employees submit leave requests through email, managers respond manually, and HR updates leave records in Excel sheets. This process is time-consuming, prone to human error, lacks transparency, and makes it difficult for employees to track the status of their leave requests.

3. Business Objective

The objective of the Employee Leave Management System is to automate the leave management process by providing an online platform where employees can submit leave requests, managers can review and approve or reject requests, and HR can maintain accurate leave records. The system aims to improve efficiency, reduce manual work, increase transparency, and provide real-time leave tracking.

4. Stakeholders

The following stakeholders are involved in the Employee Leave Management System project:

Stakeholder	Role and Responsibility
Employee	Applies for leave, checks leave balance, and tracks leave status.
Reporting Manager	Reviews and approves or rejects leave requests.
HR Department	Maintains leave policies, monitors leave records, and generates reports.

Business Analyst	Gathers business requirements, prepares project documentation, and communicates with stakeholders.
Development Team	Develops the application based on approved requirements.
QA Team	Tests the application to ensure it meets business requirements.
Project Manager	Plans, monitors, and manages project delivery.

5. Scope

5.1 In Scope

- Employee Login
- Employee Dashboard
- Apply Leave
- Cancel Leave Request
- View Leave Balance
- Leave Approval / Rejection by Manager
- HR Dashboard
- Email Notifications
- Leave Reports

5.2 Out of Scope

- Payroll Processing
- Attendance Tracking
- Employee Recruitment
- Performance Management
- Employee Expense Claims

6. Current Process (As-Is)

Currently, employees submit leave requests through email or by informing their manager verbally. Managers review the request and communicate their decision through email or phone. HR manually updates leave records in Excel spreadsheets. Employees often need to contact HR

or their manager to know the status of their leave request, making the process slow and prone to errors.

7. Proposed Process (To-Be)

Employees will log in to the Employee Leave Management System and submit leave requests online. The reporting manager will receive a notification and review the request. After approval or rejection, the employee will receive an automatic notification. HR will be able to monitor leave records through the system without maintaining manual Excel sheets. Leave balances and reports will be updated automatically.

8. Functional Requirements

The Employee Leave Management System shall provide the following functionalities:

FR-01: Employees shall be able to log in using their company credentials.

FR-02: Employees shall be able to apply for leave by selecting the leave type, start date, end date, and providing a reason.

FR-03: The system shall validate mandatory fields before submitting the leave request.

FR-04: The reporting manager shall receive a notification whenever a leave request is submitted.

FR-05: The manager shall be able to approve or reject the leave request.

FR-06: Employees shall receive a notification after the manager approves or rejects the request.

FR-07: Employees shall be able to view their leave balance.

FR-08: HR shall be able to generate leave reports.

FR-09: HR shall be able to configure leave types and leave policies.

FR-10: The system shall maintain the history of all leave requests.

9. Non-Functional Requirements

NFR-01: The system shall respond to user requests within 3 seconds.

NFR-02: The application shall be available 99.9% of the time.

NFR-03: User data shall be encrypted and stored securely.

NFR-04: Only authorized users shall be allowed to access the application.

NFR-05: The application shall support at least 500 concurrent users.

NFR-06: The system shall be compatible with major web browsers.

NFR-07: The application shall maintain audit logs for all leave transactions.

10. Business Rules

BR-01: Employees can apply only for available leave balance.

BR-02: Leave requests must be submitted at least one day before the leave start date.

BR-03: Sick leave may require supporting medical documents if it exceeds two consecutive days.

BR-04: Only the reporting manager can approve or reject leave requests.

BR-05: HR can modify leave balances only with proper authorization.

BR-06: Employees cannot submit duplicate leave requests for the same dates.

11. Assumptions

- All employees have valid company login credentials.
- Every employee is assigned to a reporting manager.
- Internet access is available to all users.
- Leave policies are finalized and approved by the HR department.
- Email notification service will be available throughout the project.

12. Constraints

- The project must be completed within the approved timeline.
- Development will use the organization's existing technology stack.
- The project budget is fixed.
- The system will initially support only employees within the organization.

13. Risks

- Delay in requirement approvals from stakeholders.
- Changes in business requirements during development.
- Delay in testing activities.
- Technical issues during system integration.
- Users may resist adopting the new system.

14. Dependencies

- HR must provide the finalized leave policy.
- IT team must provide user authentication services.

- Email notification service must be available.
- Management approval is required before deployment.

15. Glossary

Term	Description
ELMS	Employee Leave Management System
HR	Human Resources
BA	Business Analyst
QA	Quality Assurance
BRD	Business Requirement Document
FRD	Functional Requirement Document
UAT	User Acceptance Testing

16. Approval & Sign-off

Name	Designation	Signature	Date
HR Manager	Business Owner	Pending	-
Project Manager	Project Manager	Pending	-
Business Analyst	Requirement Owner	Pending	-
