

Functional Requirement Document (FRD)

1. Purpose

The purpose of this Functional Requirement Document (FRD) is to describe the functional behavior of the Employee Leave Management System. This document provides detailed functional requirements for developers, testers, and stakeholders to ensure the system is developed according to business needs.

2. Project Overview

The Employee Leave Management System is designed to automate the leave application and approval process. It enables employees to submit leave requests online, managers to approve or reject requests, and HR to monitor leave records through a centralized system.

3. Functional Modules

Module ID	Module Name
M01	Login
M02	Employee Dashboard
M03	Apply Leave
M04	Leave Approval
M05	Leave Balance
M06	Reports

4.1 Login Module

Description

This module allows employees, managers, and HR users to securely log in using their company credentials.

Input

- Employee ID
- Password

Process

- User enters credentials.
- System validates credentials.
- If valid, the user is redirected to the dashboard.
- If invalid, an error message is displayed.

Output

- Successful Login
- Invalid Username or Password message

4.2 Employee Dashboard

Description

The Employee Dashboard provides employees with an overview of their leave information and quick access to system features.

Input

- Logged-in Employee

Process

- Display employee profile information.
- Display available leave balance.
- Display recent leave requests and their status.
- Provide quick links to apply for leave and view leave history.

Output

- Employee Dashboard displaying leave details and available actions.

4.3 Apply Leave

Description

Employees can submit leave requests through the system.

Input

- Leave Type
- Start Date
- End Date
- Reason

Process

- Employee fills in the leave request form.
- System validates the entered information.
- System checks leave balance.
- Leave request is submitted.
- Notification is sent to the reporting manager.

Output

- Leave request submitted successfully.
- Confirmation message displayed.

4.4 Leave Approval

Description

Managers review submitted leave requests and approve or reject them.

Input

- Pending Leave Request

Process

- Manager views pending requests.
- Reviews leave details.
- Approves or rejects the request.
- Employee receives notification.

Output

- Leave Approved
- Leave Rejected

4.5 Leave Balance

Description

Employees can view their available leave balance.

Input

- Logged-in Employee

Process

- System retrieves employee leave records.

- Calculates remaining leave balance.
- Displays available leave by leave type.

Output

- Current leave balance displayed.

4.6 Reports

Description

HR can generate reports related to employee leave.

Input

- Report Filters
- Date Range
- Department

Process

- HR selects report criteria.
- System retrieves matching records.
- Report is generated.

Output

- Leave report displayed.
- Report can be exported.

5. Error Handling

- Invalid login credentials.
- Mandatory fields cannot be left blank.
- Leave request cannot exceed available leave balance.
- Start date cannot be after the end date.
- Appropriate error messages shall be displayed for all invalid actions.

6. Validation Rules

- Employee ID is mandatory.
- Password is mandatory.
- Leave type is mandatory.
- Start Date cannot be after End Date.
- Reason is mandatory for all leave requests.

- Employees cannot submit duplicate leave requests for the same dates.

7. Assumptions

- Employee information is available in the system.
- HR maintains leave policies.
- Email notification service is active.

8. Approval

Name	Designation	Status
Business Analyst	Prepared By	Pending
Project Manager	Reviewed By	Pending
HR Manager	Approved By	Pending
